Job Description

Company
Munich Re, Canada (Life)
Location
Toronto , Canada

POSITION: Engineering Co-op, NA Integrated Analytics (2026 Summer-Toronto)
LOCATION: Toronto, ON
ANTICIPATED START DATE: Summer 2026
Together, we engage with everything we have and are, to help humankind act braver and better.
As the world's leading reinsurance company with more than 40,000 employees in over 50 locations around the globe, Munich Re introduces a paradigm shift in the way you think about insurance. By turning uncertainty into manageable risk, we enable fundamental change. We recognize Diversity, Inclusion, and Belonging as a key priority with a culture that welcomes different thoughts and opinions. We dare to think big and are continuously innovating on behalf of our clients.
How can ML promote longer and healthier lives? Armed with decades of risk data, novel data sources, and a team of innovative data scientists, engineers, and domain experts, Munich RE is building solutions that are transforming the life insurance industry.
• Develop solutions that allow easier access to insurance and healthier lifestyles
•Build highly scalable products with best security, ML, DevOps practices
•Research bias and fairness, disease models, NLP & more
•Discover diverse careers with leadership opportunities
•Flexible remote/in-person work + focus on work-life balance
•Be part of a fast-growing team that values transparency & diversity

Our internship placements provide you with an excellent opportunity to practically apply your classroom and technical training in the reinsurance industry. While with our team, you'll be; coached by experienced industry professionals, exposed to Munich Re leadership, challenged as a valuable team member and contributor doing meaningful work, and mentored to develop a solid foundation that will help position you as a future leader in the field.
Munich Re is operating under a hybrid working model, including 3 days in office/week with the remaining days working from home. Students are expected to relocate to the city in which they work for the duration of their co-op, so they can fully benefit from the full program integration. This provides a great opportunity to network, develop soft skills and become immersed within the greater Munich Re culture; including engaging with your team while in-office for face-to-face meetings, sharing meaningful moments, and allocating time to connect with your Manager.
To learn more about the North American Integrated Analytics team, please visit our site: https://www.munichre.com/us-life/en/solutions/integrated-analytics.html
THE ROLE:
Responsibilities may include, but will not be limited to the following:
• Contribute to various on-the-go projects, related to the following areas of concentration (as needed and as fits with your focus):
• Create, test and support the development of Python based applications and predictive models deployed as RESTful microservices APIs
•Deploy, monitor and improve visibility for our production applications
•Integrate security into all stages of the engineering pipeline and employ a "security first" attitude
•Build data products with heavy reliance on cloud infrastructure
•Incorporate Git, testing, CI/CD workflows and PRs into any coding project
•Participate in various research projects in the field of machine learning and deep learning - collaborating with our greater team of scientists and engineers.

Job Requirements

QUALIFICATIONS:
We're looking for well-rounded individuals who are technically astute, have strong communication skills, and demonstrate the ability to build positive relationships with internal clients. We're seeking energetic and collaborative professionals who are excited to join our winning team and show promise of becoming a future leader in the engineering space.
Specifically, we're looking for the following qualifications:
Technical:
• **Undergraduate or Graduate degree in Computer Science, Engineering, Physics, Bioinformatics - or equivalent program;**
•Familiarity with Python or other object-oriented languages;
•Experience developing software using principles from the software design life cycle.
Behavioral:
• Solid communication skills; spoken & written, formal/informal presentation;
•Able to learn quickly and independently and motivated to help others;
•Proven ability to thrive in a dynamic environment;
•Ability to creatively and rapidly problem solve for on-the-job issues.
Preferred (but not required):
• Familiarity with Azure or other cloud platforms;
•Ability to independently research new tools and technologies;
•Previous exposure to insurance or financial services environment.
Note that this opportunity is open to current students who are returning to in-class studies upon the completion of the internship.

Citizenship Requirement N/A
