Ontario,

Intern, Backend Software Engineer - Team Planet
Express - Winter 2026

About Capital One Canada.

For over 20 years, we've been on a mission to change banking for good and build relationships by making credit accessible, simple, intuitive and rewarding. We want to help Canadians succeed with credit, because we believe in people - in our customers, in our associates, and in talent like you!

About the Team

Team Planet Express focuses on building Tech solutions for Terms domain and serves the Customer Management business under Canada Products and Capabilities (CPC) space. This team currently owns five business-focused solutions - Viper, Cost of Credit, MPIN, CreditCardInsurance and Canada Credit Authorization Decisioning.

Viper is the platform for Risk Based Pricing (RBP) decisioning and fulfillment. Risk Based Pricing refers to the act of changing customers' annual interest rates to a pre-disclosed penalty rate in response to certain pre-disclosed conditions.

Cost of Credit solution enhances the customer experience and fosters trust by ensuring accurate reconciliation of credit card ownership costs. The solution targets seamless crediting of accounts closed by either customers or Capital One.

MPIN workflow manages plastic numbers in Mastercard's records. Mastercard uses this information to determine how much interchange we should get. Ensuring up to date MPIN information protects Capital One's interchange revenue and keeps us compliant with the Code of Conduct.

CreditCardInsurance application manages the credit card insurance products offered to both Branded and Hudson's Bay card holders in collaboration with Assurant (policy underwriter). Canada Credit Authorization Decisioning application either authorizes or declines a Canada Credit card transaction based on a set of rules for either Credit Cards.

About the Role

As an engineer on the Planet Express you will be working with a highly collaborative, diverse mix of engineers to enhance the product vision to deliver new credit card products to the market. You will have the opportunity to work on different layers of the technology stack (Python, Java, AWS, Apache Airflow, Apache Spark, Snowflake, OneLake) and collaborate with many external teams to help achieve our mission. You will be involved in building infrastructure, feature development, testing (unit test, component test and integration test), deployment, monitoring and fixing cyber security and vulnerability fixes.

- **IDE:** IntelliJ, Visual Studio

- **Language:** Python, Java AWS: EMR, Glue, S3, Lambda, Route53, Security Groups, IAM roles

- **Monitoring Tools:** Splunk, New Relic, Cloudwatch

- **CI/CD:** Jenkins, OnePipeline (Capital One's inner-sourced CICD pipeline)

- **Data Infrastructure:** Apache Airflow, Apache Spark, ETL pipelines, Big Data, Snowflake/OneLake/Delta Lake

Your Responsibilities:

- Work as part of a dynamic team throughout the software development life cycle
- Develop code to meet story acceptance criteria
- Conduct design and code reviews to ensure high-level quality output
- Ensure adherence to continuous improvement practices as required to meet quality, and time to market imperatives
- Participate in Agile ceremonies, design and brainstorming sessions
- Collaborate with Product and Analyst stakeholders to implement enhancements or new applications
- Technical Documentation for analysis, test results and release.
- Learn and build AWS cloud infrastructure on the job
- Have fun with the team

Working at Capital One.

Enjoy a hybrid work environment, with 3 days in the office. Build a comfortable workspace with our one-time, Work From Home allowance and enjoy our head office located conveniently across the street from Union Station.

Live well-physically, financially and emotionally. Receive support for you and those who are most important to you, with full coverage for spouses, domestic partners, and dependents.
