Job Description	

About Super.com

We started [Super.com](#) to help maximize lives-both the lives of our customers and the lives of our employees- so that everyone can experience all that life has to offer. For our employees, our promise is that Super.com is more than just a job; it's an opportunity to unlock one's potential, where learning is celebrated and impact is realized.

We are more than a [fast-paced, high-growth tech company](#); we care about our people and take career progression seriously. This is your career and our aim is to supercharge it [through the people, the work, and the programs](#) that fuel who we are.

About the Role

We are looking to hire Software Engineering Interns with at least 8 months of experience to join our engineering team. It is a really exciting and technically challenging time for our engineering teams as we focus on 3 development pillars: travel, fintech, and a superapp membership to unite them along with other savings and earnings use cases. Between them, our services handle 1000s of requests per second, ingest over 1TB of data per day and process over \$1MM per day in sales, while maintaining a 99.9+% uptime.

Problems You'll Address

- Ship technically challenging projects end-to-end in a fast-paced, iterative environment
- Have the opportunity to very meaningfully propel the business forward, and recognize the impact of your work on the company's

business metrics and user experience

- Own features, services, caches, and databases, including: deployment, monitoring, debugging, and testing
- Write production-ready, well-tested code in your first week
- Be data-driven and close to the customer, performing experiments for nearly everything you launch
- Work on a combination of frontend and backend work across multiple services and codebases

Our Tech

- We use a state of the art architecture powered by microservices written primarily in Python (FastAPI). We use React (with TypeScript) on the frontend, and Postgres/Redis for storage and caching
- We use Gitlab for version control and CI/CD, and our infrastructure is hosted on AWS (using Kubernetes). It takes under 30 minutes for merged code to reach production
- We invest heavily in monitoring and automated alerting using Datadog
- We use Amplitude client-side metrics and experimentation, and Snowflake for our data warehouse

Job Requirements

About You

- You have at least 8 months of web development work experience, preferably with exposure to a dynamic, startup or scaleup environment
- You have experience working with a modern frontend JS framework (ex. React, Vue, Angular), and have worked with web servers
- You learn quickly, regardless of the languages and technologies used
- You have experience taking ownership and shipping entire features end-to-end
- You thrive on decoding intricate problems with logical, well-reasoned solutions
- You are interested in working on both the frontend and backend components of features
- You are interested in working with React on the frontend and Python on the backend

Citizenship Requirement N/A

APPLICATION INFORMATION

Application Procedure Through Employer Website

Special Application Instructions

Please click the "I intend to apply to this position" button on SCOPE and also submit your application via the employer's website.
