Job Location	Vancouver, BC
Country	Canada
Duration	4 or 8 months
Salary Currency	CAD
Salary	25.0 per hour for 0 Major List
Salary Range \$	25-35
Job Description	

We are looking for a motivated and detail-oriented co-op student to join our team in a DevOps-focused role. You will help streamline and improve our local development environments, tooling, and processes. While there may be some infrastructure-related tasks, the primary focus will be on enhancing the developer experience, ensuring consistent setups, and maintaining alignment across various platforms (Ubuntu, Windows, macOS, and Codespaces).

Why you should work here

We are working on a transformational project that we believe will have a global impact, and we expect our team members to work on solving complex, unique technical problems on a daily basis. Team members are given a high degree of product ownership and the latitude to propose and implement approaches that can be divergent from all standard or existing solutions.

Scrawlr is committed to maintaining an environment in which all ideas are taken seriously and great ideas are adopted, allowing dedicated employees to effect change and to dictate their progression within the organization.

Co-op students who perform in line with expectations will be provided with the opportunity to immediately transition to a full-time position at Scrawlr.

If you are eager to enhance developers' day-to-day productivity and learn more about DevOps, this role is for you! You will be a key part of improving our workflows, working with a supportive team, and gaining the hands-on experience needed to grow your skill set. Apply today to help us streamline and evolve our developer environment!

Please note: Candidates must be currently authorized to work in Canada

We are an equal opportunity employer, and all qualified applicants will receive consideration for employment without regard to race, colour, religion, sex, national origin, disability status, protected veteran status, or any other characteristic protected by law.

Responsibilities

- **Improve Development Environments:** Enhance and maintain container configurations, scripts, and local tooling to ensure consistent developer setups.
- **Tooling & Process Optimization:** Collaborate with developers to review, refine, and consolidate different tools, dependencies, and libraries.
- **Version Alignment:** Assist with identifying and resolving version misalignments across various services and libraries.
- **Technical Documentation:** Create and maintain clear onboarding and operational documentation to help new team members and current developers understand tooling and workflows.
- **CI/CD Collaboration:** Work alongside the infra team to ensure existing build and test pipelines are robust and efficient (e.g., writing or reviewing small scripts, configuration updates).
- **Developer Support:** Provide assistance to developers on environment issues, helping them adopt best practices and standard processes.

Job Requirements

Desired Skills & Experience

- Currently pursuing a degree/diploma in Computer Science or a related field (or relevant experience).
- 0-3 years of experience in a development or DevOps-related role (co-op, personal projects, or equivalent experience).
- Familiarity with container technologies (e.g., Docker) and some exposure to orchestration tools (e.g., Kubernetes) is helpful.
- Basic understanding of CI/CD pipelines (e.g., CircleCI, GitHub Actions, or similar).
- Comfortable with JavaScript and Bash (or similar).
- Familiarity with Linux-based environments and shell scripting.
- Understanding of basic relational database concepts (e.g., PostgreSQL) or caching layers (e.g., Redis) is a plus.

Soft Skills

- Strong interpersonal and communication abilities.
- Ability to work independently, conduct research, and self-manage time effectively.
- Collaborative mindset, open to brainstorming solutions and knowledge-sharing with the team.
- Analytical and problem-solving aptitude with a genuine interest in DevOps and developer tooling.

Work Environment

- Join a team of passionate engineers and business professionals who value openness and collaboration.
- Opportunity to learn and grow in a fast-paced environment where your ideas and contributions matter.
- Hands-on experience with real-world development and DevOps challenges, including exposure to emerging technologies and best practices.

Nice to have skills or experience

- Experience working in start-up or agile environments.
- Exposure to debugging tools or identifying performance bottlenecks.
- Basic familiarity with security best practices in a development or DevOps context.
- Experience with configuration management tools (e.g., Ansible, Chef, or Puppet) or infrastructure as code (e.g., Terraform).
- Experience with JavaScript libraries/frameworks (e.g., Node.js, Vue.js, Solid.js, or similar)
- Interest in scalable, high-performance systems and services.

Citizenship Requirement N/A
