Job Description	

Vidigami - Junior QA Developer

We are offering a terrific opportunity for a junior developer with an entrepreneurial flare to work with our experienced business and technical team to develop testing infrastructure for our application and ecosystem. Vidigami is an exciting digital media company that is leveraging digital imaging technologies and AI to deliver content management and photo-based products and services for schools and families. We have successfully launched our program to schools across North America and need to build our team to support our growth.

You have a foundation in a range of modern web technologies and testing tools (specifically React, SQL/NoSQL , AWS). You are motivated by applying knowledge in a highly iterative product release cycle and are committed to doing things the "right" way.

Role:

We are looking for a Junior QA Analyst to join our Development team during a dynamic growth stage of the company. This role requires an Automation Tester who has a background in development and has experience in multiple scripting languages.

Responsibilities:

- Execute and maintain automated functional, integration, regression, and performance tests
- Developing and implementing automation test suites
- Implementing automation in a continuous delivery environment
- Take direction from senior developers on test and QA implementation
- Take ownership of some aspects of testing and QA
- Some self-management and willingness to dig into areas that need more definition or research
- Work with the development team as a whole to ensure testing is properly implemented and meets our needs

We work hard in a nurturing environment using Scrum processes. The ideal candidate would be someone who is team-oriented, proactive and multi-talented, and likes to learn and try new things. We love technical innovation and delivering compelling consumer experiences. We are inspired by building memories for families and thrive on creating a culture that cherishes that.

Prefer Start Date: Mid August

Job Requirements

Qualifications:

- Bachelor's or Master's degree in computer science
- Experience with Git, JavaScript, T-SQL queries
- Some experience with React or similar JavaScript libraries
- Some experience with SQL and/or NoSQL databases
- Some experience with managed services (AWS, Heroku, Azure, etc)
- Some experience with any testing framework (Selenium, Codeception, PHPUnit, Mocha, etc)
- Some experience writing tests
- Some experience with the shell (mostly Linux)

Bonus:

- Critical thinking skills and attention to detail
- A demonstrable ability to learn and apply new technologies quickly
- Experience with content-heavy websites (photos, videos)
- Experience working in an agile team (Scrum, Kanban)
- Experience with DevOps - deploy to AWS/Heroku, monitoring/reporting, automation, etc
- Active in the Open Source community

Citizenship Requirement N/A
