| Job Description | |

At Fullscript, we're not just changing healthcare-we're making it whole.

We help **100,000+** healthcare practitioners support **10 million patients** with a platform that delivers evidence-based health solutions, diagnostic support, and practitioner tools-all in one place.

Healthcare today is disconnected. We're fixing that. **Fullscript makes it easier for practitioners to treat the whole person, not just symptoms, so patients get the support they need-when they need it.**

We're building a better way-one where healthcare is connected, complete, and built for impact.

Product Engineering is responsible for all feature development at Fullscript, including retail, wholesale, and administrative functions of the platform. Each Product Engineering team is self-sufficient: they are able to take their projects from start-to-finish. An Intern will see the complete project and software development life-cycle, from initial planning phases to release, while on their team. This paid Software Engineering internship opportunity is open to students who are legally eligible to work full-time hours (~40/week) in Canada. We're looking for a self-motivated, "get it done" attitude and reliable students who enjoy collaborating with a dynamic team to craft a world-class experience.

All interns who work for Fullscript will gain valuable hands-on experience (even on day one) and the chance to learn at a fast-growing company. This is how we like building software: <https://fullscript.com/developer-handbook>. If you share our values, we'd be excited to chat with you!

4, 8 and 12 month internships available.

What does an intern developer do here? You will:

- Focus on improving your skills in several languages and technologies, but with the main focus on **Ruby and Ruby on Rails**.
- Be involved in project breakdowns, code reviews, and have a steady stream of deploys yourself.
- Help us write code for new features, update code, and fix bugs
- Be able to choose side development projects in other areas of interest
- Above all, you will have the full workplace experience: go through our onboarding program, have 1:1s with Tech Leads, receive mentorship, get feedback, teach your teammates new things, and be viewed as any other full-time developer.

What you'll bring to the team:

- Currently pursuing, or recently completed, education in software engineering, computer science, or similar area.
- Legally entitled to work full-time in Canada
- Previous internship/co-op experience, ideally in a team environment within a software company
- Some experience, professional or project, with Ruby and/or Ruby on Rails

Bonus if you're familiar with:

- Experience with other languages (Python, JavaScript (Node), PHP, Java, etc)
- Git Version Control software
- Open Source Work
- Mac environments
- SQL databases

What's in it for you:

- We provide all our developers with a Macbook Pro during their employment.
- Get to participate in fun, engaging events: Town Halls, Hackathons, Bug Safaris, Dev Talks, and more.
- Your code ships, normally in the first week! You will make a real impact and get to see your work come to life.
- Learn from some of the best software engineers in one of Canada's fastest growing startups
- Ability to work Wherever You Work Well*

Why Fullscript?

Great work happens when people are supported, challenged, and inspired. Here, you'll be part of a team that:

- ? Values innovation-we push boundaries and always look for better ways.
- ? Supports growth-through learning, mentorship, and meaningful work.
- ? Cares about balance-with flexible work options and time off when you need it.

Apply now-let's build the future of healthcare, together.

Fullscript is an equal-opportunity employer committed to creating an inclusive workplace. Accommodations are available upon request-email accommodations@fullscript.com for support.

Before joining the team, all candidates who receive and accept an offer will complete a background check.
