Job Description	
About Fullscript	

We're an industry-leading health technology company on a mission to help people get better. We started in 2011 with one simple idea. Make it easier for practitioners to access the products they trust so they can deliver better care.

That simple idea grew into a platform that powers every part of care. Today, more than 125,000 practitioners use Fullscript for clinical insights, lab interpretations, patient analytics, education, and access to high-quality supplements. Over 10 million patients rely on Fullscript to stay connected to their care plans and follow through on treatment.

We build tools that make care smarter and more human. Tools that save time, simplify decisions, and help practitioners stay closely connected to the people they care for. When everything they need is in one place, they can focus on what matters most: *helping people get better.*

This is your invitation.

Bring your ideas, your grit, and your care for people.
Join us and shape the future of care.

Product Engineering is responsible for all feature development at Fullscript, including retail, wholesale, and administrative functions of the platform. Each Product Engineering team is self-sufficient: they are able to take their projects from start-to-finish. An Intern will see the complete project and software development life-cycle, from initial planning phases to release, while on their team.

This paid Software Engineering internship opportunity is open to students who are legally eligible to work full-time hours (~40/week) in Canada. We're looking for a self-motivated, "get it done" attitude and reliable students who enjoy collaborating with a dynamic team to craft a world-class experience.

All interns who work for Fullscript will gain valuable hands-on experience (even on day one) and the chance to learn at a fast-growing company. This is how we like building software: <https://fullscript.com/developer-handbook>. If you share our values, we'd be excited to chat with you!

What does an intern developer do here?

- Focus on improving your skills in several languages and technologies, but with the main focus on **Ruby and Ruby on Rails**.
- Be involved in project breakdowns, code reviews, and have a steady stream of deploys yourself.
- Help us write code for new features, update code, and fix bugs
- Be able to choose side development projects in other areas of interest
- Above all, you will have the full workplace experience: go through our onboarding program, have 1:1s with Tech Leads, receive mentorship, get feedback, teach your teammates new things, and be viewed as any other full-time developer.

•What's in it for you:

- We provide all our developers with a Macbook Pro during their employment.
- Get to participate in fun, engaging events: Town Halls, Hackathons, Bug Safaris, Dev Talks, and more.
- Your code ships, normally in the first week! You will make a real impact and get to see your work come to life.
- Learn from some of the best software engineers in one of Canada's fastest growing startups
- Ability to work Wherever You Work Well*

Job Requirements

What you'll bring to the team:

- Currently pursuing, or recently completed, education in software engineering, computer science, or similar area.
- Legally entitled to work full-time in Canada
- Previous internship/co-op experience, ideally in a team environment within a software company
- Some experience, professional or project, with **Ruby and/or Ruby on Rails**

Bonus if you're familiar with:

- Experience with other languages (Python, JavaScript (Node), PHP, Java, etc)
- Git Version Control software
- Open Source Work
- Mac environments
- SQL databases

Citizenship Requirement	N/A
-------------------------	-----

APPLICATION INFORMATION

Application Procedure Through Employer Website

Special Application Instructions

Please click the "I intend to apply to this position" button on SCOPE and also submit your application via the employer's website.

Application Link: Fullscript - Software Developer (Summer 2026 - Co-op/Intern)
