About 1Password

At 1Password, we're building the foundation for a safe, productive digital future. Our mission is to unleash employee productivity without compromising security by ensuring every identity is authentic, every application sign-in is secure, and every device is trusted. We innovated the market-leading enterprise password manager and pioneered Extended Access Management, a new cybersecurity category built for the way people and AI agents work today. As one of the most loved brands in cybersecurity, we take a human-centric approach in everything from product strategy to user experience. Over 175,000 businesses and millions of people trust us to provide seamless, secure access to their most critical information.

If you're excited about the opportunity to contribute to the digital safety of millions, to work alongside a team of curious, driven individuals, and to solve hard problems in a fast-paced, dynamic environment, then we want to hear from you. Come join us and help shape a safer, simpler digital future.

The Enterprise Ready Team focuses on the B2B side of our product. We are creating a best in class experience for our Business customers by adding features that allow them to control how the password manager operates for their employees. We are building a flexible infrastructure and intuitive tooling that enables large enterprise customers to represent their organizations within the admin console.

This is an exciting opportunity to contribute to one of the biggest growth areas in the company.

This is a remote opportunity within Canada. This position will be for 4 months - January to April 2026.

What you can expect:

- Build features that streamline the Admin user's experience and support the company's growth goals.
- Write efficient, scalable, and robust features in our web (TypeScript and GoLang) tech stacks.
- Collaborate with people across the company like Product, Design, Marketing, Sales, Customer Support, and other Software Development teams.
- Take a full stack approach to development by navigating everything from databases up to the frontend UI.

Job Requirements

What we're looking for:

- Confidence: A willingness to take on new challenges, and see them through to completion.
- Humility: You're not afraid to ask "stupid" questions and make mistakes (as long as you learn from them).
- Curiosity: You look for better ways of doing things, even if everyone seems happy with how they are.
- Teamwork: We work together, and succeed as a team!

Bonus points for:

- Backend web development experience with languages like GoLang.
- Frontend web development experience with modern JavaScript frameworks like React, Angular, or Vue.js.

Citizenship Requirement N/A
