Job Description	

Job Title: Software Developer Intern (Co-op)

Department: R&D, Platform Engineering and Solutions

Reports To: Jon Marus

Position Type: Co-op Internship (4 months, with possibility of extension)

Compensation: \$25-\$30 CAD per hour (paid internship)

About Us:

VRIFY is positioned at the forefront of the mining industry's transformation, leveraging artificial intelligence to modernize mineral exploration. Our platform synthesizes large volumes of geological data to support smarter exploration decisions and improve how mining companies communicate complex information to investors.

In addition to AI-driven exploration tools, VRIFY develops immersive 3D and 360° visualization experiences that make complex geological information more accessible and engaging. Our goal is to build practical, real-world software that delivers meaningful value to both technical and non-technical users.

As we continue to grow our AI-driven platform, VRIFY remains focused on innovation, learning, and building high-quality technology in a collaborative environment.

As a **Software Developer Intern (Co-op)**, you will support the development and improvement of web-based software applications as part of our engineering team. This role is designed for students who want hands-on experience working on real production

software while learning modern development practices.

You will work closely with experienced software developers who will provide guidance, mentorship, and regular feedback. You will contribute to features, bug fixes, and improvements under supervision, with a strong emphasis on learning, collaboration, and skill development.

This role is not intended for senior or experienced professionals. Curiosity, a willingness to learn, and a solid foundation in programming fundamentals are the most important qualities for success.

Key Responsibilities:

- Assist with building and improving web-based software features
- Support implementation of AI-powered functionality under guidance
- Help translate product or design requirements into working software
- Write clean, readable, and well-documented code
- Participate in code reviews as a learning opportunity
- Assist with debugging issues, testing fixes, and improving reliability
- Learn and follow best practices for version control and software development
- Assist in building world class product for the mineral exploration industry.
- Support experimentation, evaluation and iteration of products using latest AI-driven capabilities.

What We Offer:

- Paid co-op internship at \$25-\$30 CAD per hour
- Mentorship and hands-on learning from experienced software developers
- Exposure to real-world product development and engineering workflows
- Remote-first work environment in Canada
- Supportive, learning-focused team culture

This job description has been written to provide an accurate reflection of the internship and the general nature of work performed. It is not intended to list every task or responsibility. Responsibilities may evolve as learning and business needs change.

We strive to create an environment where every team member feels valued, respected, and supported regardless of race, gender, age, religion, identity, or experience. We believe diverse perspectives strengthen our teams and our products. If you require accommodations during the application or co-op placement, please let us know.

Job Requirements

Skills and Qualifications:

Co-op Eligibility (Required):

- Currently enrolled in a recognized post-secondary institution
- Eligible for and registered with an official co-op program
- Able to complete the internship through required co-op channels

Technical & Academic Qualifications:

- Enrolled in or pursuing a degree in Computer Science, Software Engineering, or a related field
- Academic or personal project experience in software or web development
- Basic knowledge of JavaScript, HTML, and CSS
- Introductory exposure to a modern JavaScript framework (e.g., React or Vue)
- Familiarity with Git and version control fundamentals
- Basic understanding of how applications communicate with APIs
- Familiarity and affinity with LLM backed software development tools (e.g., Cursor, Claude Code, etc.)
- Understanding of web application hosting

Citizenship Requirement	N/A
