Job Description	

At Motorola Solutions we are helping solve some of the biggest challenges around safety and physical security by developing advanced artificial intelligence (AI) technologies and products that are used to help keep people, businesses, and cities around the world safer. Avigilon, a Motorola Solutions company, designs, develops, and manufactures advanced AI, video analytics, network video management software and hardware, surveillance cameras, and access control solutions that help change the way people interact with their security systems.

Our co-ops don't wash cars or do coffee runs. They also don't work on side projects. Our co-ops are treated like full team members and are given the opportunity to learn what being a developer is like in the real world. You'll have the opportunity to learn new technologies and best practices in coding, testing and automation.

You'll also have a lot of fun and make a lot of friends. For the duration of your work term, you will be a member of a multi-disciplinary engineering team responsible for the design and implementation of the next generation of Motorola's market-leading high-performance video solutions products.

We are looking for the best people: smart, creative, passionate about their work, and excited for new challenges.

The successful candidate will be responsible for:

- Using Go/C++ to produce and maintain robust, high performance, scalable application software
- Acting as a member of a scrum team responsible for features required to deploy and maintain AI features for video security
- Designing, creating, maintaining, and delivering code and scripts for Linux environments
- The application of object-oriented patterns for the design of concurrent, networked, software components

Job Requirements

Qualifications:

- Progress towards a degree in Computer Engineering, Computer Science, or related technical discipline
- Demonstrated Go/C++ design and programming ability (including new C++11 and C++14 features)
- Strong knowledge of multithreaded operating systems, performance, applications and concepts
- Knowledge of IP networking applications and concepts
- Academic or job-related experience developing software in a Linux environment
- Excellent verbal and written communications skills

Preference will be given to candidates with the following skills and experience:

- Knowledge of digital video/audio codecs, standards, transport and concepts
- Knowledge of computer vision and machine learning
- Experience with Go
- Experience with Python

Citizenship Requirement N/A
