Job Description

Responsibilities:

You will work on our product team and with health professionals to improve medical clinic operations using our software products.
This may involve distributed system design, managing infrastructure, troubleshooting, and debugging

Job Requirements

Requirements:

• Have at least 1 year of experience with Python and (ideally) Django web framework.
•Experience in JavaScript, HTML, CSS.
•Care about code quality and system maintainability, balanced with the immediate needs of your team and users. It takes creativity, experience, and effort to balance these competing constraints.
•Have excellent and engaging written English skills, to help create clarity.
•Be able to work remotely.
•Be a continuous, self-motivated learner, and always push to improve the environment for yourself and your team members.
•Experiment and investigate a problem deeper yourself, but know when to ask your team for help.
•Voice disagreements rather than keeping them to yourself. We need all opinions to be on the table in order to make the best decision.
•Be able to uncover, and focus on, what's really important in a complex environment with many distractions.
•And of course, a passion for making healthcare better for patients!

Also an asset:

• Previous experience in an Agile/Scrum project environment.

•Experience with Docker and/or Linux. Other DevOps experience is a bonus.

•Bachelor degree in computer science, or relevant skills from engineering or science degrees

Citizenship Requirement   Canadian & Permanent Residents & Refugees Preferred
