Job Description	

P-963

At Databricks, we are passionate about helping data teams solve the world's toughest problems - from making the next mode of transportation a reality to accelerating the development of medical breakthroughs. We do this by building and running the world's best data and AI infrastructure platform so our customers can use deep data insights to improve their business.

As a Software Engineering Intern, you will join a team of engineers to build features that contribute directly to the Databricks platform. We're hiring across all of our teams, including full stack, backend, infrastructure, systems, tools, cloud, databases, and customer-facing products. You will have a dedicated mentor and will join our 2026 intern cohort where you'll connect with engineers, other interns, and leaders from across the company.

We are hiring Software Engineering Interns across multiple offices. Please apply for the single location that you're the most interested in, and we will discuss more with you as you move through the process. We can only consider one application in 30 days.

The impact you will have:

• Work with a team to build features for the Databricks platform

•Manage your project end-to-end, including design, code, and feedback

•Learn about building a platform that scales quickly while maintaining quality and security

You can select one of the following programs through this application: Winter 16-week co-op, Summer 16-week co-op, or Summer 12-week internship. Co-ops are only available to students enrolled in a co-op program.

Pay Range Transparency

Databricks is committed to fair and equitable compensation practices. The pay range(s) for this role is listed below and represents the expected salary range for non-commissionable roles or on-target earnings for commissionable roles.
