Job Description

JR453

Our internship program aims to support the development of high potential individuals through an engaging learning experience at a global investment management firm. We will provide you with a project-focused internship where you can learn the latest technologies and industry best practices from technical experts.

We believe that technology is critical to our success as a firm and provides us with a competitive advantage by building our own systems instead of acquiring from third parties.

This opportunity is a competitively paid, four-month internship/co-op with the option to extend at the discretion of Orbis and the student.

Why Orbis?

• **Culture**. We are committed to our Core Values. We encourage intellectual curiosity and individualism as well as collaboration across different areas of the business. We seek to hear our people's voices - whether quiet or loud. Sharing ideas and challenging the status quo are commonplace.

•**Autonomy.** While guidance and support are provided, team members own their work and projects.

•**Growth opportunities.** We support our people in continuous learning and development.

•**Agile environment.** We are committed to providing our people with a work environment that balances their personal needs, commitments, and interests with the needs of their team and the needs of our clients.

•**Philanthropy.** Our people can contribute to society in a unique and personal way, through various philanthropy opportunities and programmes.

What will your responsibilities be?

You will receive one-on-one mentorship to perform your key responsibilities and support your experience. Additionally, you will be using the same technologies that our developers use, working on a meaningful software engineering project guided through interactions with various stakeholders.

Specific projects vary depending on business requirements, however, as an intern you can expect to:

• Build internal platforms using technologies such as .NET, ASP.NET, SQL, AWS, Kubernetes, Angular, React and more (*project dependent)
• Develop algorithms and models to transform raw data into valuable information
• Design, code, test and deploy new system features using industry standard practices and tooling

What we offer

The base salary for this position will be $6,000 per month.

Job Requirements

Your qualifications & experience

We hire people with potential - we are looking for self-starters who are excited to learn new skills and experience new technologies during this internship. People who excel in this internship typically have:
• Undergraduate student or recent graduate with a proven track record of academic achievement and continuous improvement
• Demonstrated experience in software development outside of coursework
• Strong communication skills with an interest in leveraging this to work with stakeholders to understand and solve business problems using technology
• No previous knowledge of finance required

Citizenship Requirement   N/A

APPLICATION INFORMATION

Application Procedure   Through Employer Website
Cover Letter Required?   Optional
Address Cover Letter to   Hiring Manager
Special Application Instructions

Please apply via the link here:
