Job Description

Curious, collaborative, and eager to break stuff (in a good way)? Join us!

We're looking for a Software Test Engineer Co-op to join our Vancouver office for a full-year internship opportunity. This is a hands-on role where you'll work side-by-side with experienced test engineers and developers on cutting-edge network security software technology.

While you'll be working locally out of our Vancouver office, the team you'll collaborate with is spread throughout North America- primarily based out of our Seattle HQ. You'll be immersed in a real-world engineering team, gain exposure to our development processes, and have the chance to make a meaningful impact on a high-visibility product.

What You'll Be Doing

- Following detailed test cases and executing hands-on testing in real environments.
- Writing simple testing tools and scripts to support the team.
- Collaborating with test engineers, developers, support staff, and technical writers.
- Testing client-server applications over a variety of network environments.
- Advocating product quality by elevating issues when necessary and verifying fixes.
- Protect the security and privacy of Absolute and its customers

- Other duties as assigned by management

Why This Co-op Rocks

- Real-world, hands-on QA experience on a strategic product.
- Mentorship from seasoned engineers.
- A chance to build your technical skillset while working with a geographically diverse team.
- Exposure to Agile workflows, client-server architecture, and modern development practices.

This is an opportunity to challenge yourself, grow professionally, and make meaningful contributions-all while surrounded by supportive teammates who want to see you succeed.

Job Requirements

What You Bring to the Team

- You're working toward a degree in Computer Science, Software Engineering, or a related field-or you've completed relevant coursework or previous testing experience.
- You have a basic understanding of networking concepts and protocols.
- You're comfortable working in Windows-based network environments with Mac, Android, and iOS clients.
- You've dabbled in scripting (Python preferred) and are curious about programming (C# or Java is a bonus).
- You're excited to learn new concepts, especially around testing and networking fundamentals.
- You're self-driven and can manage your tasks independently but also thrive when working as part of a collaborative team.
- You have strong analytical thinking and solid organizational skills.
- Bonus: You speak a second language (Japanese, French, Italian, German, Spanish = extra points!).

Citizenship Requirement N/A

Position Start Date June 08, 2026 12:00 AM

Position End Date June 04, 2027 12:00 AM
