Job Description	

About Kinaxis

In 1984, we started out as a team of three engineers. Today, we have grown to become a global organization with over 2000 employees around the world, with a brand-new HQ based in Kanata North in Ottawa. As one of Canada's Top Employers for Young People (2024), we want to help you take the first step in crafting your career journey.

At Kinaxis, we power the world's supply chains to help preserve the planet's resources and enrich the human experience. As a global leader in end-to-end supply chain management, we enable supply chain excellence for all industries, with more than 40,000 users in over 100 countries. We are expanding our team as we continue to innovate and revolutionize how we support our customers.

About the Team

The Product Security team is responsible for the Security Development Lifecycle at Kinaxis. Identifying and remediating security related flaws across Kinaxis' software applications, "red teaming" new features, threat modeling, security assessments and enhancing our overall security posture are core to our team responsibilities.

Location

This is a hybrid position. You must be in the Ottawa, Canada office, at least three days a week

Term Duration

This is a full-time, 8 month position, starting May 2026

Co-op or Intern

This position is open to co-ops and interns as soon as you can work full-time with no interruption for 8 months starting May 2026. To be eligible for a Co-op or Intern position at Kinaxis, you must either be currently enrolled in full-time education or, if you are a recent/upcoming graduate, your graduation date must be within 12 months of the placement end date

Compensation range

\$25.24 - \$37.02 hourly rate. The final offer within this range will reflect the candidate's skills, year of education and experience.

Vacancy Status

This is an existing job vacancy.

About the role

As an Intern in Product Security, you will partner closely with stakeholders across the business, including Corporate IT, Cloud Services, Product Development and technology partners to contribute to the implementation of security solutions and controls.

This role is ideal for someone passionate about both software development and cybersecurity - someone who enjoys digging into code, understanding how systems work, identifying their flaws and offering recommendations on remediation.

You will have exposure to the full software development lifecycle and develop skills in areas such as threat modeling, static / dynamic analysis, vulnerability management, offensive security and more.

What you will do

- Identify security risks at the application level, at each stage of development, and proactively work to ensure that risks are assessed and mitigated across the business
- Integrate static and / or dynamic code analysis tools into the SDLC
- Arrange or conduct vulnerability and penetration tests against defined systems
- Monitor application security trends and evolving technologies and keep senior management informed about related application security issues and implications for Kinaxis
- Assist in performing risk assessments, threat modeling and other product security related reviews
- Review and triage of SAST and SCA reports, working with developers to prioritize and remediate findings
- Help maintain and fix issues in CI / CD pipelines
- Implement enhancements to our in-house custom built security tools.

Job Requirements**What we are looking for**

- Completion of the 2nd year of a Computer Sciences / Computer Engineering program, Cybersecurity or related field
- Basic knowledge of technical skills relevant to Application Security such as secure coding, application security testing, ethical hacking techniques, vulnerability and threat management
- Hands-on experience with vulnerability management and penetration testing tools (e.g. NMAP, Burp Suite, OWASP ZAP, Nexpose, SonarQube, Metasploit, etc.)
- Familiarity with one or more programming languages such as JavaScript, PowerShell, Python, Java, C#, etc.
- Familiarity with the OWASP Top 10
- Highly adaptable and able to pivot based on prioritization and needs of the business; proactively solicits feedback to ensure

alignment

- Excellent communication and collaboration skills

Things that would definitely help

- Experience with Docker and / or Kubernetes, Jenkins
- Participation in CTFs, security clubs or open-source contributions
- Understanding of CI / CD pipelines and DevSecOps practices

Citizenship Requirement N/A

APPLICATION INFORMATION

Application Procedure Through Employer Website

Special Application Instructions
