Job Description

Description

Environment and Climate Change Canada (Meteorological Service of Canada) is looking for students to join our department in the role of data management and web developer/tester. We are looking for enthusiastic students interested in making an impact to join us.

Duties may include:

- Developing software to work with real-time alerting.
- Developing business process models, requirements specifications, use cases, relational data models, maintaining controlled vocabularies, and detailed data specifications for scientific or corporate data and metadata based on research and engagement of clients and subject matter experts.
- Documenting existing and proposed business processes, policies, and systems, assessing the impact of proposed changes to the organization and recommending solutions, and validating proposed processes, designs, or applications against requirements

- Performing external scans to determine industry standards and best practices.

You will be expected to work on multiple project teams as well as independent work packages. Students hired into the role are expected to make concrete contributions to the development of dissemination systems and services.

You may be assigned to projects in areas such as:

- Geospatial standards analysis and implementation of geospatially-enabled information systems.
- Creating a data collection method for data to be ingested into an existing in-house statics website.
- Working with Environment Canada IT staff to ensure that web applications being developed adhere to Government of Canada guidelines.
- Enhance an admin and stats web interface in PHP for data in a PostgreSQL
- Verification, configuration and testing of a new alerting system.
- Work on network monitoring systems

You may also be involved in other major Environment and Climate Change Canada/ Meteorological Service of Canada initiatives.

3 Job Position Details

- Number of positions to be filled: **One(1)**
- Student rates of pay are set by the Treasury Board of Canada Secretariat: <https://www.canada.ca/en/treasury-board-secretariat/topics/pay.html>
- The positions are available for a 4-month work term starting **April 28, 2026**, through **August 28, 2026** at our **Vancouver** office.
- **Note:** There is a possibility that this may be extended to an 8 or 12-month work term.

Preference will be given to **Canadian citizens**. Preference may be given to students with job-related experience and to students with higher academic standing. Students to whom an offer is made will be required to pass a check for Security Clearance as a condition of employment.

4 About Environment and Climate Change Canada

At Environment and Climate Change Canada (ECCC), our business is protecting the environment, conserving the country's natural heritage, and providing weather and meteorological information to keep Canadians informed and safe. Environment and Climate Change Canada is building on its accomplishments with the environment through credible science, effective regulations and legislation, successful partnerships, and high-quality service delivery to Canadians.

We support sound environmental decisions. We work to repair the damage of the past, to collect and pass on knowledge, and to develop, implement and enforce policies to prevent future issues. We also work to ensure that Canadians have a safe, clean and sustainable environment today, tomorrow and well into the future.

Environment and Climate Change Canada is a diverse organization where our programs, services, and people lead the way in implementing the Government of Canada's environmental agenda. We collaborate with our partners at home and abroad, to realize concrete progress on initiatives that will protect the health of our people and our planet.

Environment and Climate Change Canada's mandate is to preserve and enhance the quality of the natural environment, including water, air, soil, flora and fauna; conserve Canada's renewable resources; conserve and protect Canada's water resources; forecast daily weather conditions and warnings, and provide detailed meteorological information to all of Canada; enforce rules relating to boundary waters; and coordinate environmental policies and programs for the federal government.

Our workforce is made up of knowledgeable and dedicated employees from diverse backgrounds that are proud of the contribution they make to the environment. We have 6800 employees from a broad range of fields, including biology, chemistry, meteorology, climatology, engineering, commerce, communications, law enforcement, environmental sciences, hydrology, informatics, law, library science, policy, and more. Our employees work in over 100 communities across the country, from Iqaluit to Toronto and Vancouver to St. John's. Over 65 percent of our workforce is located outside of Ottawa. Our diverse expertise strengthens our ability to deal with increasingly complex and changing environmental issues. From the Canadian Ice Service to the Canadian

Hurricane Centre, from laboratories and weather stations to national wildlife areas and field **offices**, our people deliver quality services.

****Please note this position is either in-person or a hybrid schedule****
