Job Location	Toronto, ON
Country	Canada
Duration	4 months
Work Mode	Hybrid
Salary Currency	CAD
Salary	0.0 per hour for 0 Major List
Salary Range \$	\$50,000 - \$62,000
Job Description	

Summary

You'll join Guidewire's Professional Services team, the group that partners directly with customers to design and deliver solutions on our cloud platform. Within Professional Services, the Digital team builds modern, intuitive web experiences using Guidewire's Jutro design system and cloud technologies. You'll join a collaborative, learning-focused environment that combines strong engineering practices with close customer partnership.

As a Front-End Developer Intern, you'll help design and develop digital experiences that bring Guidewire's insurance products to life for agents, policyholders, and internal users. You'll grow your skills in React, modern web development, and AI-assisted tools while working alongside experienced consultants and engineers-ideal for someone eager to learn how enterprise software is delivered and to build scalable front-end solutions that streamline implementation.

Want to join Guidewire Basecamp?

A place for you to belong and thrive. Guidewire Basecamp is our graduate and intern program. Designed through research from our own former interns and graduate level employees, Guidewire Basecamp is the program that all our interns and graduates become a part of when they walk through our doors. We give them the tools to leap further and find their own way, so they can confidently Navigate What's Next in their career.

GWBC = Guidewire Basecamp

Job Description

What you'll do

- Learn Guidewire's Digital products and Jutro design system, and apply them to customer implementation projects under the guidance of senior engineers and consultants.
- Assist in designing, implementing, and testing new front-end features for customer-facing and internal web applications using React, HTML, CSS/SASS, and JavaScript.
- Help build intuitive, responsive user interfaces that align with accessibility best practices and deliver a consistent, high-quality user experience across devices.
- Collaborate with UX Designers, Business Analysts, and InsuranceSuite implementation teams to translate user and business requirements into practical, reusable UI components.
- Support integration of front-end components with RESTful APIs and backend services, including troubleshooting and refining data flows.
- Use Git and modern development workflows to contribute clean, maintainable code, participate in code reviews, and learn professional engineering practices.
- Experiment with and apply AI-assisted development tools (such as GitHub Copilot or Claude) to increase your productivity, code quality, and test coverage as part of our broader AI-powered services strategy.
- Contribute to internal examples, documentation, and implementation patterns that help Professional Services scale repeatable, high-quality digital solutions for customers while advancing our mission to transform how P&C insurers do business through cloud and AI-enabled experiences.
- At Guidewire, we foster a culture of curiosity, innovation, and responsible use of AI-empowering our teams to continuously leverage emerging technologies and data-driven insights to enhance productivity and outcomes.

Job Requirements

What you'll bring

Required

- Demonstrated ability to embrace AI and apply it to your current role as well as data-driven insights to drive innovation, productivity, and continuous improvement.
- Current enrollment in the 3rd or 4th year of a Bachelor's degree, or a graduate program, in Computer Science, Software Engineering, or a related technical field.
- Foundational knowledge of web development, including experience with HTML, CSS, SASS, and JavaScript through coursework or projects.
- Familiarity with React and modern front-end concepts such as components, props, and basic state.
- Strong understanding of Object-Oriented Programming (OOP) principles and core software design fundamentals.
- Awareness of responsive design techniques and web accessibility considerations.
- Clear, proactive communication skills and the ability to collaborate effectively in a hybrid, cross-functional team environment.
- Curiosity, a problem-solving mindset, and willingness to learn from feedback in a consulting and customer-facing context.

Preferred

- Prior hands-on React development experience through academic projects, personal work, or internships.
- Understanding of React state management (e.g., hooks, context) and basic performance considerations.
- Experience with Git or other version control systems and standard branching workflows.
- Familiarity with RESTful APIs, JSON, and integrating front-end apps with backend services.
- Exposure to AI-assisted development tools (e.g., GitHub Copilot, ChatGPT, Claude) and interest in using them to accelerate delivery.
- Basic knowledge of build tools and package managers such as Webpack, npm, or similar.

Citizenship Requirement N/A
