Job Description

Position: Full-Stack Product Developer (Co-op)

Duration: 4 months (with the option to extend to 8 or 12 months)

Work Model: Hybrid

Lucra Tax is seeking a Full-Stack Product Developer (Co-op) to join us at an early stage and play a meaningful role in building and launching our product.

This is not a traditional development-only role. You will contribute across both software development and product management, helping complete an MVP, launch the product, and iterate toward product-market fit. At Lucra Tax, we believe the best developers understand users-their needs, pain points, and what makes a product truly valuable.

You will work closely with an experienced founding team and gain exposure to the full lifecycle of an early-stage software startup.

What you'll do

Primary Responsibilities:

- Develop and ship new product features across the full stack
- Analyze, troubleshoot, and resolve bugs and performance issues in both frontend and backend systems

Additional Responsibilities:

- Build and enhance a consumer web application and a complementary mobile application
- Participate in product discovery and product management activities

- Help complete and launch the MVP and support post-launch iteration
- Participate in user walkthroughs and feedback sessions
- Use system monitoring, tracing, and user replays to identify usability and performance issues
- Write unit tests and end-to-end (E2E) tests
- Work within agile development processes
- Contribute to an AI-powered platform that automates tax preparation and tax consulting, including prompt engineering and the design of AI-assisted workflows
- Support roadmap initiatives including:
 - A mobile app for capturing photos of receipts
 - Gmail integrations and applications

Technology Stack

- Typescript
- SvelteKit
- Drizzle ORM
- PostgreSQL
- Playwright (BDD)
- Cucumber (unit testing)
- OpenAI APIs
- Lightdash (reporting)
- Cloudflare
- Claude Code
- Cursor

Job Requirements

Required / Strongly Desired:

- 3rd or 4th year Computer Science student with strong programming skills
- Experience with full-stack web development
- Strong CSS skills and web application UI design experience
- Strong SQL skills (PostgreSQL experience is a plus)
- Familiarity with agile development methodologies
- Experience writing unit tests and end-to-end (E2E) tests
- Ability to work across both frontend and backend codebases
- Interest in product thinking, user experience, and usability
- Strong problem-solving and debugging skills
- Comfortable working closely with a small, fast-moving team

Nice to Have:

- Experience with Svelte or SvelteKit
- Exposure to AI-powered applications or prompt engineering
- Experience participating in user research, walkthroughs, or usability testing
- Interest in startups and early-stage product development

Citizenship Requirement Canadian & Permanent Residents & Refugees Only
