Job Description	

QA Analyst position with Vecima Networks, Inc.

Contigo helps people manage and secure the things important to them using advanced wireless and location technologies. We develop and manage the industry's leading location-based services platform for asset-tracking, fleet management and lone worker safety applications. Founded in 2002, Contigo is now a part of the Vecima Networks Inc Telematics Division.

We deliver our suite of products to value-added resellers, major wireless carriers and enterprise customers, leveraging our rapid-cycle product development processes and our patented SaaS platform.

In the past, Contigo has received the following awards: Red Herring 100 Global Winner , Profit 100 Canada's Fastest Growing Companies, Business in Vancouver's Top 100 Fastest Growing Companies, Ready to Rocket 25, and IDC Canada's Ten To Watch.

We are looking for a Quality Assurance Analyst to assist with the ongoing testing of our suite of web-based GPS tracking applications and devices. In this role you will have the opportunity to work on cutting edge software applications, and test the functional performance of next-generation GPS tracking devices.

The ideal candidate is highly-motivated and passionate, and is looking for a challenge in a growing company. We value creativity and innovation, and willingness to step up to the plate. An ability to work in a team environment is critical. You must be a self-starter, and be able to work independently with a "can-do" attitude.

Job Description:

- § Develop and maintain test cases to meet functional requirements for GPS-based tracking devices
- § Develop and maintain test scripts using automated testing tools

- § Execute extensive manual and automated testing
- § Identify and report bugs using the defect tracking system, verify fixes, and manage through to resolution
- § Assist in end-to-end testing of our Web and Mobile Portals before each release
- § Must be highly motivated, focusing on QA test process and its relationship to producing a quality end product.

Job Requirements

Required Qualifications:

- § Good understanding of QA methodologies, testing techniques, and software development lifecycle
- § Some software server-side or Web development experience
- § Excellent problem troubleshooting, diagnostic, planning, and time management skills
- § Very strong analytical and organizational skills
- § Strong and effective oral, written, and presentation skills
- § Work on several projects at the same time and work closely with other teams
- § Good team player and strong interpersonal skills

Desired Skills:

- § Experience with testing GUI and web based applications
- § Experience with testing mobile apps (iPhone and Android)
- § Experience in Agile, particularly in Scrum
- § Experience working in both Windows and Linux environments
- § Understanding of wireless networks and protocols
- § Understanding of GPS and mapping technology
