 Job Title 	S26 QA Automation Engineer Co-op 179088B
Position Type	Co-op Position
Job Location	Remote
Country	Canada
Duration	8 months
Work Mode	Fully Remote
Salary Currency	CAD
Salary	0.0 per hour for 0 Major List
Salary Range \$	\$26.00 - \$28.80/hr
Job Description	

About:

Founded in 1998, thirdstream's platform provides leading identity verification and account opening for individuals and businesses, serving financial institutions from coast to coast. thirdstream's account opening ecosystem drives retail, commercial, and credit card onboarding. Our remote digital identity verification supports customizable online and in-branch consumer experiences.

Job Description:

We are seeking a motivated and talented Junior QA Automation Engineer with a background in programming and experience in testing web-based applications (AngularJS preferred) for an 8 month co-op placement. As a co-op student, you will collaborate closely with our development and quality assurance teams to design, implement, and execute automated tests, ensuring the delivery of high-quality software to our clients. Note: there will be some manual testing involved in this role. The ideal candidate is meticulous, detail-oriented, and possesses an understanding of quality assurance methodologies, and software development processes.

Responsibilities

- Collaborate with the QA team to develop and maintain automated test scripts for the backend and front end.
- Work closely with cross-functional teams to understand software requirements, design test scenarios, and create comprehensive test plans.
- Execute automated tests to validate software functionality, identify defects, and ensure optimal performance.
- Read, understand and follow test scripts. Must be able to help put together meaningful and complete test scripts based on software flows and test plans.
- Collaborate with developers to troubleshoot, reproduce, and report software defects, and track their resolution.
- Continuously enhance and update automated test suites to accommodate new features, improvements, and changes.
- Participate in code reviews and contribute to the improvement of software quality by identifying opportunities for automation and

process enhancements.

- Monitor and analyze test results, generate reports, and provide valuable insights to the development team.
- Conduct Website testing and automated scripting.
- Contribute to a culture of quality and excellence, sharing best practices and fostering continuous improvement within the QA team.

Other

- As we are a fully remote organization, we ask all employees to use their own computer and in exchange we will give a monthly allowance to help cover depreciation costs.

Salary range: \$26.00 - \$28.80/hr depending on experience

Job Requirements

Qualifications

- Currently pursuing a degree in Computer Science, Information Technology, or a related field.
- Previous experience in a QA role is a benefit, specifically working web testing frameworks, API testing (swagger, readyApi, postman)
- Familiarity with test automation tools and languages, preferably Playwright.
- Understanding of web application testing principles, methodologies, and best practices.
- Experience with testing AngularJS-based applications, including components, services, and UI interactions.
- Familiarity with version control systems (Git) and continuous integration/continuous deployment (CI/CD) pipelines.
- Knowledge of agile software development methodologies and the role of QA within the development lifecycle.
- Excellent problem-solving skills and the ability to diagnose, track, and manage defects effectively.
- Strong communication skills and the ability to collaborate effectively within cross-functional teams.
- Detail-oriented mindset with a commitment to delivering high-quality software products.
- Adaptability to a fast-paced environment and a willingness to learn and embrace new technologies.

Citizenship Requirement N/A
