Job Description

Job Title: RLS Integrated Test Engineer Co-op (8 to 16 Month)

Job ID: R030377

As the global leader in high-speed connectivity, Ciena is committed to a people-first approach. Our teams enjoy a culture focused on prioritizing a flexible work environment that empowers individual growth, well-being, and belonging. We're a technology company that leads with our humanity-driving our business priorities alongside meaningful social, community, and societal impact.

How You Will Contribute:

Requirements for telecommunications networks are constantly evolving, and our products also need to advance and scale to meet the needs of our customers while also delivering uniform and consistent user experiences.

As an RLS Integrated Test Engineer in a dynamic team environment, you will push the boundaries of what is possible in optical network solutions. You will work alongside experienced professionals to ensure the reliability and performance of projects that play critical roles in our network solutions and help build upon our innovative technology. You will also challenge yourself and others by bringing enthusiasm and fresh ideas to new challenges and leading by example.

- You will be responsible for designing, implementing, and maintaining both manual and automated test cases which play a key role in ensuring the quality of critical optical networks utilizing the RLS platform.
- You will participate in the full software development lifecycle, collaborating with multi-functional teams of developers, designers, quality assurance teams & release managers.
- Engage engineering teams, product managers and product owners to transform high-level requirements into optimized test coverage.
- Work in an agile development environment, participate in sprint activities to plan and produce high quality deliverables in rapid cycle and support activities across scrums.
- Participate in group design meetings and internal brainstorming discussions to discuss solutions to problems or ideas for new features.
- You will be accountable for managing individual project priorities, assignments, and timelines.

The pay range for this position is: \$25.00-34.00

Pay ranges at Ciena are designed to accommodate variations in knowledge, skills, experience, market conditions, and locations, reflecting our diverse products, industries, and lines of business. Please note that the pay range information provided in this posting pertains specifically to the primary location, which is the top location listed in case multiple locations are available.

In addition to competitive compensation, Ciena offers students access to the Employee Assistance Program (EAP), company-paid holidays, paid sick leave, and vacation pay as required by applicable laws.

At Ciena, we are committed to building and fostering an environment in which our employees feel respected, valued, and heard.

Ciena values the diversity of its workforce and respects its employees as individuals. We do not tolerate any form of discrimination.

Ciena is an Equal Opportunity Employer, including disability and protected veteran status.

If contacted in relation to a job opportunity, please advise Ciena of any accommodation measures you may require.

Job Requirements

The Must Haves:

- Enrolled in Electrical/Computer Engineering, Computer Science or a related field coupled with a demonstrated ability to design and execute manual and automated test cases.
- Familiar with test automation tools and environments
- Experience working with various network interfaces to communicate with test equipment such as Serial, USB, Ethernet
- Experience working in a Linux environment
- Experience with programming in python & JavaScript
- Proven debugging skills
- Excellent written (documentation) and interpersonal communication skills.
- Passion for improving product quality through testing
- Strong abilities to work as part of a team or independently with little supervision.
- A proactive self-starter with a high degree of confidence and commitment

Assets:

- Proven experience testing software embedded solutions engineered for performance and reliability.
- Flexibility is an asset as responsibilities can change from time to time depending on the priority of the team and company.
- Familiar with the principles of fiber optic communication systems and optical components.
- Familiar with test and network equipment command line languages such as vendor specific APIs, YANG, NETCONF, REST and OpenConfig

Citizenship Requirement N/A
